A SUCCESS STORY

ContainerPort Group reduces safety labor costs by 20%

About ContainerPort Group

ContainerPort Group (CPG), Cleveland, Ohio, is an international and domestic intermodal carrier, specializing in container trucking, container depot operations, rail, warehousing, and logistics. They have about 1,300 independent contractors in 23 terminal locations.

The Challenge

Different CPG systems housed essential driver and fleet files. Limited access restricted management's ability to view and respond to time-sensitive data quickly. They needed a way to compile a complete view of driver behavior and fleet performance.

"

ContainerPort GROUP

"InfoStream helped us improve our compliance and risk management processes to become a safer and more compliant fleet."

Vice President,
Safety & Compliance,
ContainerPort Group

"

RESULTS

Reduced safety and risk labor costs by 20%

Realized a 50% improvement in expired document updates

Reduced driver document renewal delays by 50%

Provided a faster remedial training response

Increased driver and employee satisfaction

Improved DQ file compliance

The Solution

CPG selected InfoStream to automate and configure their workflow in a single, end-to-end solution by installing Driver Qualification File Management, Vehicle File Management, Annual Safety Review, Accident Scene Management, Roadside Inspection Management, and Log Violation Management.

"The support team at InfoStream has been great. They've configured the back-end functions as our operation evolves. I would recommend this tool to any organization looking for mobile document imaging"

Vice President,
Safety & Compliance,
ContainerPort Group

The Future

ContainerPort Group seeks to leverage more third-party systems by integrating with InfoStream's platform. Plans include integrating driver performance, background reports, and in-cab videos.
