RMIS

The Solution to Staying In Compliance

Learn how to effectively manage risks across your organization.

RMIS: Consistent Execution to Limit Liability

Risk management information system (RMIS), is at the heart of critical decision making. EBE's RMIS is a crucial tool for informed decision-making. It integrates seamlessly with DOT and non-DOT crash and incident events, covering cargo & injury claims, reserve and litigation management. EBE's RMIS also aligns with a carrier's TMS, fleet maintenance, accounting systems, and Third-Party Administrator (TPA), providing a comprehensive view and eliminating redundant data entry. By consolidating all insured risk data into one platform, RMIS provides a clear view of risks, their relationships, and their impact on your organization. This saves time, improves accuracy, and centralizes candidate information all in one location. In addition, DOT regulations have been incorporated, aiding compliance post-crash. By automating tasks and streamlining workflows, the stress on the risk management team is reduced, resulting in decreased risk exposure and a lower overall cost of risk.

What are your risks? What are your needs?

Ask yourself, what is the level of complexity of your risks and how sophisticated are your needs? For companies with few locations, employees, assets, insurance carriers, and reporting needs, spreadsheets and file shares may suffice. However, as your company expands, so do risks and the demand for more data and reporting to manage them effectively.

Are you struggling with gathering multiple carriers or TPA data or are unable to easily produce necessary reports? An RMIS automates data collection and validation, freeing up time for more valuable strategic tasks. Gain access to complete and timely data, enabling smarter and faster decision-making to mitigate losses and reduce premiums.

Incident Reports Designed for Your Organization

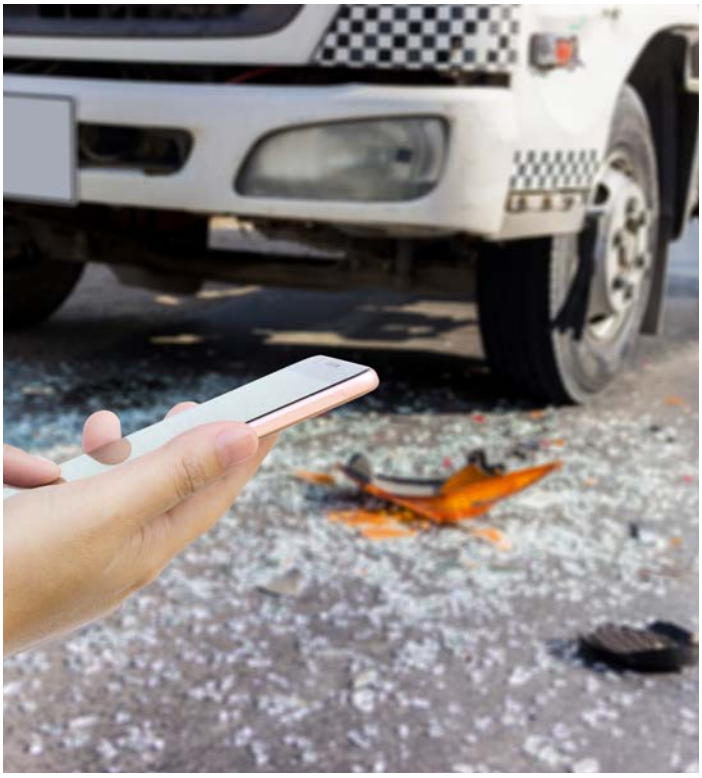
Can you capture all crashes, incidents, notify and escalate to management, investigate and identify root causes, and identify the best corrective measures, all automatically? The longer it takes to respond to an incident, the greater the liability and the increased likelihood of an error. With EBE's RMIS solution, gain near real time access to incidents and required compliance procedures, minimizing impact on normal business operations. EBE provides unprecedented insight into risks, enabling quick and confident decision making when the unfortunate happens.

Act Fast, Act Smart, & Correct when Needed

Say the worst has happened, and a DOT crash has occurred. EBE's RMIS begins by inputting data into an initial crash management profile. It will guide you through DOT reporting, ensuring compliance with mandatory statues such as ambulance services, towing, and drug tests. Through seamless integration with a carrier's dispatch, accounting, ELD, camera, and fleet maintenance systems, data can be shared and preserved. Detailed reports on costs and reserve amounts, categorized by GL code, are then readily available.

What do you gain with RMIS?

- **Consistent responses**
- **Guidance in DOT Compliance**
- **Single Repository for All Crash/ Incident Mediums**
- **Protect Financial & Human Capital**
- **Track Data, Outcomes, and Reports**
- **Utilize Root Cause Determinants to Improve Operations**



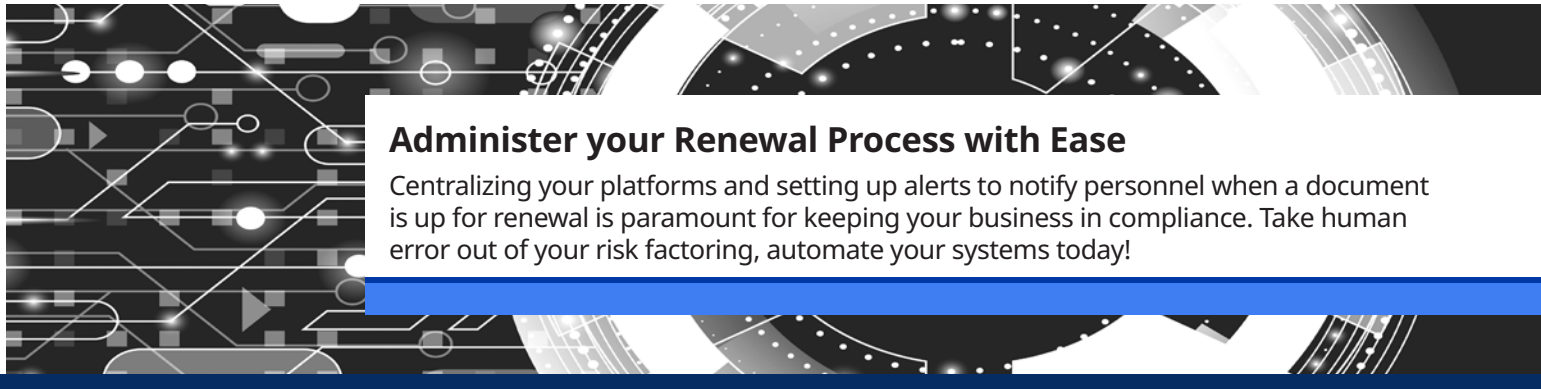
Understand Claims Now: Predict & Prevent Later

The back office processes of RMIS involve tracking and managing various aspects of risk-related events, including cargo claims, injuries, and litigation. The system handles all required data from the Department of Transportation (DOT) and the company through dynamic workflows to ensure visibility, accuracy, and timely management of these events.

Real-Time Data at Your Fingertips

In EBE's RMIS, accident reports, cargo claims, injuries, and litigation are meticulously tracked and managed. Dynamic workflows collect and process DOT documents and company-required data, ensuring visibility, accuracy, and timely management of risk-related events. When a crash occurs, relevant data, including incident details, third-party involvement, injuries, and cargo damage, is efficiently collected and submitted through dynamic workflows, accurately capturing mandated information. EBE's RMIS acts as a centralized repository, providing authorized personnel with visibility and accessibility for analysis and decision-making in crash-related data management. Injuries and drug testing data often fall under HIPAA guidelines. EBE's RMIS allows motor carriers to control access based on roles, with options for restricted, read-only, data input, and edits. RMIS aims to consolidate, streamline, and minimize duplicate efforts.

Cargo claims within the RMIS system receive thorough tracking and management attention. Automated workflows capture and process claim-related data, ensuring precise and timely documentation, covering aspects like cargo damage specifics, supporting documentation, and any linked litigation. By documenting the final resolution of cargo that were compromised such as delivered, partially delivered, return to shipper, destroyed can provide insight to minimize such claims in the future. This streamlined approach significantly boosts the efficiency of handling both crash reports and cargo claims, reinforcing robust risk management practices overall.



Administer your Renewal Process with Ease

Centralizing your platforms and setting up alerts to notify personnel when a document is up for renewal is paramount for keeping your business in compliance. Take human error out of your risk factoring, automate your systems today!

Navigating the Maze of Workman's Comp and Litigation

Workman's compensation and litigation management are efficiently handled within EBE's RMIS, providing a comprehensive framework for tracking and managing these critical aspects of risk. In the case of workman's compensation, the system facilitates the collection and processing of relevant data related to employee injuries or illnesses. This includes details such as incident reports, medical records, and associated costs. By utilizing dynamic workflows, the RMIS system ensures the timely submission and accurate documentation of workman's compensation claims. This centralized approach not only enhances the visibility of such claims but also enables risk managers to analyze trends, assess the financial impact, and implement preventive measures to mitigate workplace injuries and associated costs.

Litigation management is a crucial component within EBE's RMIS system. The software aids in tracking and managing legal proceedings arising from incidents or crashes. The system captures details of legal actions, statute of limitations by state, encompassing case specifics, legal expenses, and court outcomes. By centralizing litigation data, EBE's RMIS system allows for a systematic and organized approach to legal risk management. It offers insights into the frequency and nature of legal actions, empowering organizations to devise strategies for mitigating future litigation risks. In summary, EBE's RMIS system enhances the efficiency and effectiveness of both workman's compensation and litigation management, contributing to a more proactive and informed risk management strategy within an organization.

EBE's RMIS system provides an adept and comprehensive framework for efficiently handling workman's compensation and litigation management, two critical facets of risk. This holistic integration significantly boosts the efficiency and effectiveness of both workman's compensation and litigation management within an organization, ultimately fostering a more proactive and informed approach to overall risk management.

RMIS Automatically:

- **Captures workman's compensation claims data, documents, and videos**
- **Manages dynamic workflows for timely submission of compensation claims**
- **Documents incident reports, medical records, and associated costs**
- **Enhances visibility and analysis of workman's compensation trends**

Invest in EBE's RMIS Solution Today!

There are many risks that could interfere with achieving your goals: competitive pricing, asset management, compliance, incident management, and much more. Moreover, evolving regulations and changing physical locations of employees, equipment, and goods mandate increased scrutiny over organizational activities. There's a lot to keep track of, but EBE is here to help you overcome the challenges of the transportation industry.

EBE

With more than 650 customers and over 50 years of experience, EBE has emerged as the clear market leader in enterprise business process management solutions for the transportation industry. We are dedicated to helping transportation companies of any size or industry segment improve operational efficiencies, enhance customer satisfaction and increase profitability by delivering innovative business information systems.
